

TASER

The taser will not be seen much by the audience, the majority of it will be covered by the hand of the one holding it or kept in a taser holder. The most important part to get right is the part that is visible to the audience, namely the front. To best emulate the concave shaped front and plastic finish of a taser (see reference) a peeler will be used as the base.

METHOD STATEMENT

A peeler will form the base of the taser. The blade will be removed, and a method would need to be devised to make the handle thicker, more rectangular and more substantial. Lastly, details will be painted on to make it more realistic and taser-like.

TASER HOLDER

The taser holder will be a pouch made to fit the taser and will be similar to the gun leg holster I made for Assassins. The taser holder will be attached to a belt.

MATERIALS

- Scrap pieces of black faux leather from the SM cupboard
- Needle and black thread
- Silver eyelets
- Black plastic clip buckle
- Black grosgrain ribbon
